Bigram table

Instructions:

1. Look at the top of any column. For example: EA = MR.
2. For all of the other entries in this column, the beginning letter "E" is not there. It is reasoned that the user can understand that the "E" is supposed to be written there for each entry, but has been left out to prevent needless repetition.
   EB = HG, EC = EY and so on.
3. When you are looking up a bigram, use the top line first to locate the first letter in the bigram.
   Next read down the column to find the second letter of the bigram and its equivalent bigram.
4. The bigrams are reciprocal. The bigram for EA is MR. The bigram for MR is EA.
